Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Jones, R. A. and C. C. Mullins. 1992. **Commercial Atlantic salmon catch for Western Newfoundland and Southern Labrador, Gulf Region: Annual Summaries 1974-1990 and weekly catches 1989-1990.** Can. Data Rep. Fish. Aquat. Sci. No. 893. vi + 74 p.

This report summarizes the annual Atlantic salmon commercial catch and effort for Western Newfoundland and Southern Labrador, Gulf Region, from 1974 to 1990. Weekly catches and mean weights for 1989 and 1990 have been summarized by Coastal Area, Statistical Section, Statistical Area, Salmon Fishing Area, Gulf Region - Southern Labrador, Gulf Region - Insular Newfoundland, and Gulf Region - Western Newfoundland and Southern Labrador. Monthly summaries comparing local and plant sales for 1989 and 1990 have also been summarized by the same sub-divisions. Commercial landings totalled 122 t in 1989 and 87 t in 1990. Catches in 1990 represented 91% of the 95 t quota. The peak catches for south western communities occurred during weeks 25 and 26 in 1989 and 1990, while for north western Newfoundland and southern Labrador communities, catches peaked during week 28 for both years.

RÉSUMÉ

Jones, R. A. and C. C. Mullins. 1992. **Commercial Atlantic salmon catch for Western Newfoundland and Southern Labrador, Gulf Region: Annual Summaries 1974-1990 and weekly catches 1989-1990.** Can. Data Rep. Fish. Aquat. Sci. No. 893. vi + 74 p.

Le présent rapport résume l'effort de pêche et les prises commerciales annuelles de saumon de l'Atlantique dans l'ouest de Terre-Neuve et le sud du Labrador, région du Golfe, entre 1974 et 1990. Nous avons résumé le taux de capture hebdomadaire et le poids moyen des prises en 1989 et 1990 pour chaque région côtière, section de statistique, secteur de statistique, zone de pêche au saumon, ainsi que pour les trois composantes suivantes de la région du Golfe : le sud du Labrador, la partie insulaire de Terre-Neuve et l'ouest de Terre-Neuve. Des sommaires mensuels dans lesquels on compare les ventes locales et les ventes aux usines pour 1989 et 1990 ont également été établis pour chacune des sous-divisions susmentionnées. Les débarquements commerciaux s'élevaient à 122 t en 1989 et à 87 t en 1990. Les prises de 1990 représentaient 91 % du contingent, fixé à 95 t. Dans les collectivités de pêche du sud-ouest, les prises les plus élevées ont eu lieu durant les semaines 25 et 26 en 1989 et 1990, tandis qu'au nord-ouest de Terre-Neuve et au sud du Labrador, c'est la semaine 28 qui a donné les meilleures prises, et ce durant les deux années.

INTRODUCTION

This report summarizes the Gulf Region commercial Atlantic salmon (**Salmo salar**) catch data for 1989 and 1990 adding to the already extensive database of commercial Atlantic salmon fishery harvests in Newfoundland and Labrador. The Gulf Region consists of three Salmon Fishing Areas (SFA) [12, 13, 14 (14a and 14b)] which are comprised of seven Statistical Areas (J2, K, L, M, N, A(01) and O(50)). Gulf Region commercial catch statistics for previous years are found in May and Lear (1971), Lear (1973), Waldron (1974 a,b), Reddin and Waldron (1976), Reddin and Day (1980), Moores and Dawe (1980), Reddin and Short (1981), Short and Reddin (1981 a,b), Moores et al. (1984), Ash (1984), Ash and O'Connell (1986), and Claytor et al. (1991). It is important to make the data available to the fisheries managers, biologists, and the fishing industry since fishing regulations are often based on catch timing and catch trends.

The commercial fishery in 1989 was regulated by seasons, license, and gear restrictions, similar to those since 1984 (Claytor and Mullins 1990). Regulation of the fishery was increased in 1990 with the introduction of landed, round weight quotas (Mullins and Jones 1991).

The commercial seasons, as outlined in the 1989 and 1990 Atlantic Salmon Management Plans, were as follows:

	1989 SEASON		1990 SEASON		
SFA	OPEN	CLOSE	OPEN	CLOSE	QUOTA(t)
12	Closed		Closed		
13	June 5	July 10	June 5	July 3	35
14	June 5	Oct. 15	June 5	July 14	50
14(b) *	-	-	July 20	July 30	10

* Southern Labrador received an additional 10 t quota, with each individual fisherman limited to 75 tags.

The minimum mesh sizes permitted were as follows:

SFA	BOUNDARIES	MESH SIZE:
13	Cape Ray to Cape Anguille	127 mm
13	Cape Anguille to Cape St. George	114 mm
13	Cape St. George to Cape St. Gregory	127 mm
14		127 mm

METHODS

Data collection and compilation methods are similar to those of previous reports (Ash and O'Connell 1986, Claytor et al. 1991). Data were obtained from 3 sources:

1. Plant sales recorded on buyer's purchase slips supplied by Dept. of Fisheries and Oceans (DFO), Statistics and EDP Systems Branch.
2. Local sales estimated on Supplementary "B" slips by DFO, Conservation and Protection Branch, field personnel.
3. License data, including number of licenses and gear amounts (fathoms) were obtained from DFO, Resource Management Division (licensing).

Purchase slips represent the daily plant sales by individual fisherman (or CFV Number) as recorded by the fish buyer. Other information recorded includes price per unit weight, grade of fish, type of fishing gear used and the place landed. Place landed is usually the community nearest to the fisherman's berth. Therefore catch

can be determined for each community, regardless of the location of the plant purchasing the salmon. For Atlantic salmon, buyers are also requested to record numbers and size of fish.

Salmon are reported in two size categories based on whole round weight: small (< 2.7 kg) and large (> = 2.7 kg). The majority of the fish plants use < 5 lbs (2.27 kg, gutted head-on) as the maximum weight for small fish. If size is not indicated on the purchase slip then the total weight caught is proportioned into small and large categories based on methods described in previous reports (Ash and O'Connell 1986, Claytor et al. 1991) (Fig. 3). Fish plant personnel and fisheries officers are also requested to indicate numbers of fish, but if no numbers are indicated then these are also estimated (Fig. 4).

Local sales represent the portion of the catch not sold to fish plants. Local fisheries officers are asked to provide a monthly estimate of salmon either sold directly to consumers, given away or consumed by the individual. Estimates of these local sales are submitted as community totals once a month. Daily plant sales are used to proportion the monthly local sales into daily local sales. If no plant sales are recorded, then the catch is divided evenly among those days the season was open for that particular month (Fig. 3).

License data include the number of licenses and gear units, including full-time and part-time fishermen. During the 1990 season, a quota monitoring program was initiated and commercial salmon tags were issued to 356 licensed fishermen. A total of 76 fishermen were issued tags in Southern Labrador, but only 60 were licensed with Gulf Region. The remaining 16 were fishermen licensed with Newfoundland Region but who have traditionally fished south of Cape St. Charles (Mullins and Jones 1991). Therefore, the number of licenses for the Coastal Area, Cape St. Charles, could be adjusted to include those fishermen. A summary of licenses and gear units for 1975-1983 is provided by Ash and O'Connell (1986), while 1984-1988 data are summarized in Claytor et al. (1991). Full-time fishermen are generally licensed for a total of 200 fathoms (366 m) of net (50 fathoms = 1 gear unit).

Catches were reported in different landed conditions at the point of sale, including whole weight, gutted head-on, gutted head-off, or salted. Conversion factors of 1.2, 1.25, and 1.3 were used to convert the last three to round weight, respectively (Reddin and Short 1981). The majority of the catches are reported in the gutted head-on condition. Weights from Supplementary "B" and purchase slips, recorded in pounds, are converted to kilograms.

Annual Summaries:

The annual summaries include total weight and numbers for small and large salmon catch, and percent small. Long term means of 5 (1985-1989) and 10 (1980-1989) years are calculated with 95% confidence limits. For the years 1987 to 1990, the annual summaries include adjusted weights and estimated numbers that were calculated from the weekly summaries of Statistical Area. The annual summaries for Salmon Fishing Area, Gulf Region - Insular Newfoundland, and Gulf Region - Western Newfoundland and Southern Labrador were obtained by summing the Statistical Area totals.

Weekly Summaries:

Weekly data have been summarized by standardized week (Table 1) for Coastal Area, Statistical Section, Statistical Area, Salmon Fishing Area, Gulf Region - Southern Labrador, Gulf Region - Insular Newfoundland, and Gulf Region - Western Newfoundland and Southern Labrador (Fig. 1,2; Table 2,3). Summaries include catch (small, large, unsized and total), adjusted weights (small and large), mean weight (small and large) and estimated numbers (small, large and total). The methods used to produce the weekly summaries are described in previous reports (Ash and O'Connell 1986, Claytor et al. 1991).

Monthly Summaries:

The percentage local sales versus plant sales for small and large categories combined are presented by Coastal Area, Statistical Section, Statistical Area, Salmon Fishing Area, Gulf Region - Insular Newfoundland and Gulf Region -Western Newfoundland and Southern Labrador.

SUMMARY

GULF REGION

The total license and gear amounts remained virtually unchanged from previous years, with no new licenses being issued for either fishing season (Table 4). Salmon Fishing Area 14 had 70% of the issued licenses. The 1989 landings for Gulf Region, Western Newfoundland and Southern Labrador were 122 and 87 t during the 1990 season, when a 95 t quota was introduced (Table 5).

The 1989 Fishery:

The 1989 Gulf Region landings, by weight, represented only 70% of the previous year total and were also below 5 & 10 year means (Table 5). Similar declines occurred in Insular Newfoundland (Table 6). SFA 14 accounted for 62% of the Gulf Region catch while the Southern Labrador catch was 34% of the total landings (Table 7,8). The percentage of small salmon in Gulf Region landings dropped to 57% and the small catch dropped to 60% of previous year, while large salmon catch dropped only 10%. Small and large salmon catches peaked during standardized week 25 (Table 10). Local sales represented 33% of the Gulf Region reported catch (Table 17), in contrast to 27% and 41% for 1987 and 1988, respectively (Claytor et al. 1991).

The 1990 Fishery:

A 95 t quota was implemented for the 1990 fishing season in Gulf Region. Total landings were reduced 29% from the 1989 total and 40-49% from the 5 and 10 year means (Table 5). The same declines occurred in Insular Newfoundland as totals were reduced by 22%, 39% and 48% from previous, 5, and 10 year means (Table 6). Catch was distributed evenly between SFA 13 and SFA 14, while Southern Labrador catch represented 27% of the Gulf Region landings (Table 7,8). Small salmon represented 62% of the 1990 landings, up from 57% in 1989. The 37% decline in large salmon landings in 1990 from 1989, follows the reduced small salmon catch in 1989, suggesting that abundance was lower. The peak catches were later in 1990, with the greatest catch of small and large salmon occurring in week 26 (30%), and week 27 (21%), respectively (Table 19). Similar to 1989, local sales represented 36% of the reported catch for Gulf Region (Table 26).

SALMON FISHING AREA 13

The fishing effort for SFA 13 was similar to previous years, with fishermen fishing in Area K, representing 19% of the licensed Gulf Region fishermen (Table 4). The total landings in SFA 13 declined relative to previous years, in both 1989 and 1990, to 46 and 43 metric tons, respectively (Table 8).

The 1989 Fishery:

The total SFA 13 landings in 1989, represented 60% of the 1988 catch, and were below long term means (Table 8). The catch composition was 60% small, by weight, and 80%, by number, which was down 14% and 8% from 1988, respectively (Table 8). Area K catch accounted for 68% of SFA 13 landings. Area K and Area L catches declined from previous year totals, 39% and 43%, respectively (Table 9). Small salmon catch peaked during week 25 (27%), same as Gulf Region catch, while large salmon, contrary to Gulf Region, peaked during the first week of the season, week 23 (27%) (Table 13). Of the five Statistical Sections within SFA 13, Section 40 contributed 41% of the total landings (Table 15). The Coastal Area with the largest landings within SFA 13, St. Georges Bay Central, accounted for 32% of the catch (Table 16). Codroy was the only Coastal Area, within SFA 13, where large salmon represented the largest percentage of the catch. Similar to the Gulf Region, local sales comprised 37% of the total landings.

The 1990 Fishery:

The 1990 reported catch for SFA 13 exceeded the 35 t quota by 22%, but was 7% below 1989 (Table 8). The small salmon landings increased 5% from 1989, but decreased 28% and 13% from 5 and 10 year means. As in 1989, Area K accounted for 68% of the SFA total, but was 7% below the previous year (Table 9). The percentage of small salmon was above previous, 5 and 10 year means. The small salmon catch peaked during week 26 (36%), while the peak period for large salmon catch occurred during week 24 (29%) (Table 22). Section 41 caught 39% of the SFA total, as landings increased by 34% from 1989 (Table 24). The greatest Coastal Area catch came from Flat Bay, 22% of the SFA total (Table 25). Local sales accounted for 37% of total landings, similar to 1987 and 1989 but was down 43% from 1988 (Claytor et al. 1991).

SALMON FISHING AREA 14

In SFA 14 the number of licensed fishermen dropped by 2 in 1989 and another 3 in 1990, with Area N holding the largest percentage. Similar to SFA 13, total landings continued to decline. In 1989 76 t were landed while 44 t were landed in 1990 when quotas were introduced (Table 8).

The 1989 Fishery:

In SFA 14, total catch was only 79% of the previous year and below long term means (Table 8). Southern Labrador (Area O) represented the largest portion of SFA 14 catch at 54% (Table 9). The largest drop in catch occurred in Area M as total weight was only 46% of the previous year. The Southern Labrador catch, however, increased 9% from 1988 (Table 9). The small salmon catch peaked during week 28 (23%) while large salmon catch peaked during week 25 and in week 28 (Table 13). The Coastal Area, Cape St. Charles, recorded the largest catch of small and large salmon in SFA 14, with 28% and 42% of the landings (Table 16). In 1989, local sales represented 30% of the total landings, but were as high as 67% in Area M (Table 17). Local sales were only 22%, in 1987, but were as high as 39% in 1988 (Claytor et al. 1991).

The 1990 Fishery:

During the 1990 fishery, SFA 14 was allocated a quota of 50 t, and the fishery was closed on July 14. Southern Labrador (Area O) was re-opened on July 20 and given an additional 10 t quota. The 1990 landings were only 73% of the quota and 58% of the previous year's catch. The 1990 landings were 49-51% below 5 and 10 year means (Table 8). Similar to 1989, the Southern Labrador catch represented 53% of SFA 14 landings. Small and large salmon landings declined in all Statistical Areas from 1989, and small salmon in Area O declined 60% (Table 9). Small salmon catch peaked during week 28 (33%), while 33% of the large salmon catch occurred during week 27 (Table 22). As in 1989, Cape St. Charles recorded the largest catch of both small and large salmon, 16% and 47%, of SFA 14 (Table 25). Percent of total catch reported as local sales increased to 35% in 1990 (Table 26).

ACKNOWLEDGEMENTS

We thank all fisheries officers and plant buyer personnel for the time and cooperation they extended to us in the collection and analysis of the data used. Thanks to Gérald Chaput for guidance and helpful comments and to Ross Claytor who created most of the computer programs used to do the analysis.
